Greenlee develops Adjustable Non-Contact Voltage Detector

New adjustable detector is Category IV, 1000-volt rated for added safety

ROCKFORD, Ill. August, 2008 —Greenlee, a Textron Company (NYSE: TXT), has introduced a new product, the GT-16 Non-Contact Voltage Detector, that provides end-users the ability to detect power and voltage in both standard AC applications and low voltage situations, all in one tester. The Category IV, 1000-volt rated GT-16 can be used in outlets, lighting fixtures, thermostats, circuit breakers, and can also locate breaks in wire and cables.

“The GT-16 combines the functionality of the GT-11 non-contact voltage detector with the added benefit of low voltage detection of the GT-15, all in one tester,” said Paul Hoffman, senior product manager. “Changing the GT-16 product sensitivity is as easy as using the thumb dial control on the housing of the tester.”

The GT-16 comes with a thumb dial control that allows the end-user to safely detect power and low voltage without touching a bare conductor. The bright LED and audible alarm indicate that voltage is present. The cushioning grip provides for hours of tireless use and the convenient pen-size device easily fits into pockets or tool pouches. The GT-16 also has a Lifetime Limited Warranty.

For more information on the GT-16, or other test and measurement products from Greenlee, a Textron company, call 1-800-435-0786 or visit www.greenlee.com.
