**Greenlee's new 4,000-pound Cable Puller, the UT4**  
*The leader in cable pulling's new offering won't overheat, uses a 15-amp circuit*

ROCKFORD, Ill. October, 2008 —Greenlee, a Textron Inc. (NYSE: TXT) company, has launched a new 4,000-pound cable puller, the UT4. This medium force puller is designed to quickly and easily pull jobs up to 4,000 pounds, making it one of the most competitive pullers on the market. The UT4 will not overheat and only requires the use of a 15-amp circuit.

“Unlike some other medium force pullers, the UT4 truly pulls 4,000-pounds with a frame that’s designed to withstand 4,000-pounds of pulling force in all kinds of pulling set-ups,” said Jim Eisele, senior product manager, Greenlee. “The UT4 frame won’t bend or buckle when the pulling gets tough.”

The nose of the UT4 can easily be turned for up, down, and side pulls. The boom extends up to 8-feet to reach high and deep into panels. The puller leg extends up to 54-inches for additional height. For special situations, an optional boom, that extends up to 12-feet, and an optional floor mount are available. The UT4 is equipped with wheels that make it easy for one person to move it around a jobsite.

The UT4 has two pulling speeds. The no-load high speed is 26 ft./min. and is best suited for loads up to 2,000-pounds. When the load exceeds 2,000-pounds, the UT4 is easily changed to the low speed of 13 ft./min. by using a switch on the handy control box. The UT4 comes equipped with a force gauge and an integral on/off foot switch.

The improved patent-pending Quick Latch System better matches the threads on conduits from 2-inches to 4-inches in diameter and attaches more securely by using a single lock knob. For conduit that isn't threaded, the Quick Latch System has a built-in stop that allows it to attach securely around the outside of the conduit using the same lock knob. It attaches without tools and without any loose components, and no part of the latch ever goes inside the conduit.

The UT4 has 8-inch wheels to easily move around jobsites. The wheels have a 32-inch spread for good stability while letting it fit through most doors. To set up the UT4 just turn the nose for an up, down, or side pull, set the angle of the boom and extend it as needed. After using the Quick Latch System to attach the puller to the conduit, next adjust the motor angle for an up or down pull. When the job is finished, the UT4 can be wheeled to the truck and folded for storage.

Unlike motors on many cable pullers that are converted drill motors, the UT4 motor is designed specifically for long duration pulling loads. The 2-speed UT4 gearbox uses hardened steel gears for long life.

The UT4 has such built-in safety features as a circuit breaker protects the motor and the complete puller from overload situations. The right angle sheave permits the operator to stand well to the side of the puller away from
